

FIRE HYDRANT INSTALLATION REVIEW
(For hydrants not related to new subdivision construction)

Information for Applicant: *Most fire hydrants within the District are installed by Developers, as part of a new subdivision construction. The District does not install fire hydrants except as part of a main line construction project, where they are utilized to facilitate the testing and flushing of the new line.*

Occasionally, individuals will want to have a hydrant installed at a specific location. This form is for such individuals to request and receive approval to install a new hydrant.

The hydrant, if approved, must be installed by a contractor on the District's Qualified Contractor's List. All associated costs are at the expense of the Applicant, and the Applicant must engage the contractor's services and pay the contractor directly.

The installation must be in accordance with the District's Standards and Specifications, including the requirements for inspection detailed therein.

If this request is approved, there is a one-time inspection/maintenance fee of \$1500 per hydrant, payable to the District, in advance of the start of construction.

The Review fee is \$50 per hydrant, to be submitted with this application.
